

Kryton's **Krystol Internal Membrane™ (KIM)** water roofing system offers every construction detail a permanent waterproofing solution. Unlike traditional surface-applied membranes, it lasts longer and saves money. Not only does it save money, but it also reduces long-term repair and maintenance costs.

Krystol Internal Membrane (KIM)

Add to the concrete mix to turn the concrete itself into a permanent waterproofing membrane.

KIM stops water by lowering the permeability of the concrete. Through its unmatched ability to self-seal micro cracks and stop water under the most severe hydrostatic pressure, KIM is the most effective concrete waterproofing solution available.

Krystol® chemically reacts with water and un-hydrated cement particles to form insoluble needle-shaped crystals that fill capillary pores and micro-cracks in the concrete and block the pathways for water and waterborne contaminants. Any moisture introduced over the lifespan of the concrete will initiate crystallization, ensuring permanent waterproofing protection.

Krystol Waterstop System (KWS)

Use to permanently waterproof every concrete detail including Construction Joints, Penetrations, Tie Holes and Control Joints.

- 1 Wall to slab Construction Joints
- 2 Tie Holes
- 3 Wall on wall Construction Joints
- 4 Slab to slab Construction Joints
- 5 Penetrations
- 6 Control Joints
