

Retama Condominio Residencial Pool – New Construction

Monterrey, Mexico
2010

BACKGROUND

Retama is a new residential development composed of four towers overlooking Monterrey, in Northeastern Mexico. The development boasts a variety of luxury amenities including a central garden, gym, banquet room, jogging track and two infinity-edge swimming pools.

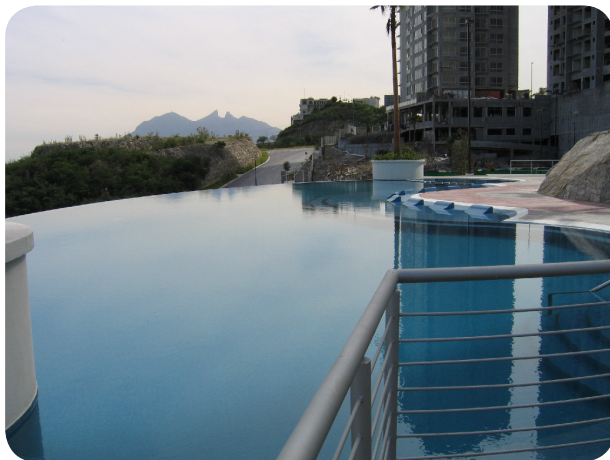

SOLUTION

In January 2010, Kryton was brought on board to waterproof one of the apartment swimming pools at Retama. The developer chose Kryton's products for its waterproofing needs because of Kryton's warranty program and ability to provide on-site supervision during the application process through its local distributor, Kalte Waterproofing.

Almost 2,500 kilograms (5,500 pounds) of Krystol Internal Membrane were used to waterproof the pool – keeping the water safely and securely in the pool for all residents to enjoy.

Almost 2,500 kilograms of KIM was used to waterproof this pool.

The luxury infinity pool at the Retama apartments was waterproofed using KIM.
